Publish As WS
Routed WS Proxy
Versioned WS Proxy
...

Description/Readme

Overview

Consumption of an external web service endpoint.

Detailed Description

A JBoss Remoting Gateway Listener accepts the incoming HTTP call makes it available to the Proxy_Basic/Proxy service, who has a message exchange pattern of RequestResponse. In the action chain, there are 3 actions:

- 1) echo out the incoming SOAP request,
- 2) use the SOAPProxy class to invoke the original webservice endpoint,
- 3) echo out the outgoing SOAP response.
